foretrack Navigation. The latest technology in vehicle tracking with a Personal Navigation Device in one complete kit.

foretrack and Garmin have teamed up to produce an exciting new system, combining the latest technology in vehicle tracking with a Personal Navigation Device **in one complete kit.**

The service supports both version 1 and version 2 of the Garmin Fleet Management Interface (FMI). This links the service to Garmin sat-nav (PND) devices, providing functionality such as:

- > Sending stops to the PND, including optimisation for the shortest route
- > Monitoring progress towards the current destination via an estimated time of arrival
- > Bi-directional messaging between the service and the PND
- > Driver identification and status
